

Backend developer

Full Name: Samoilenko Svyatoslav Igorovich

Target Position: Backend developer

Location:
Dnipro, Ukraine

Email:
bcf805b7651370c2d6b2f7@proton.me

Phone:
+38 (067) 909 11 28

Core skills

Programming languages	Python (main language), Rust (currently learning)
Backend frameworks	Hands-on experience with FastAPI, Django
Databases	PosgreSQL, SQLite
DevOps & Tools	Linux, Docker, Git, Nginx
Architecture	REST, Microservices, DRY, OOP, SOLID

Portfolio

GitHub -  **SamanuelAdmin** - Overview

- **Bespoke web development for NHMZ** - <https://ngmzhydro.com/>

Multilingual enterprise platform for industrial equipment management with a custom catalog and adaptive UI (Django/SQLite).

- **Custom SMM business solution** -  **GitHub** - **SamanuelAdmin/smmPanelParser**

High-performance asynchronous SMM services parser with a PyQt-based GUI.

- **Hackaton (KUT) project** -  **GitHub** - **SamanuelAdmin/hackaton-kut** at **pets_ms**

Stack - FastAPI, SQLAlchemy (ORM), JWT, clean architecture.

- **Non-commercial website** -

 **GitHub** - **SamanuelAdmin/SiteForInfantryDroneProject**: **One of my first big project (w...**

Project landing page providing a comprehensive project overview.

- **First useful Rust project** -

 **GitHub** - **SamanuelAdmin/air-alert-bot**: **This bot will notify you about any air alerts in you...**

Employment history

Dates	Role & company	Key achievements
2024 – Present	Python backend developer, Freelance	End-to-end web application development, from initial concept to final production. Building unique, custom-tailored solutions to meet specific client needs.
2026	System administrator, Germes	Linux & Windows Administration, managed and maintained Linux and Windows environments, configured basic MikroTik networking, handled hardware diagnostics, component-level repairs, and preventive system maintenance.

Education

Year of Entry	2024
Degree	Bachelor of Computer Science (122)
Institution	Dnipro Technical University "Dnipro Polytechnic"

Summary

Recently, as a backend developer, I have progressed from executing independent freelance projects to building systems for the industrial sector, always prioritizing creative and efficient architectural solutions. My development approach is built on a solid theoretical and practical foundation in Computer Science and a deep interest in low-level system mechanics. This journey has led me from studying the fundamentals of Java and C++ to actively working with Python and mastering Rust for high-performance tasks. Through my experience in hackathons and volunteer initiatives, I have learned to communicate effectively within a team and maintain focus even under tight deadlines.

Beyond writing code, I actively develop my system administration skills through home-labbing, designing server infrastructure, and creating IoT solutions. This multidisciplinary experience, combined with a passion for learning new technologies, allows me to do more than just write scripts — it enables me to engineer comprehensive solutions by diving deep into every technical challenge.
